

# Air unit CXU Series

# **AIR UNIT CXU SERIES**

# New-Generation Pneumatic Unit

The air unit CXU series modularizes and joins the wide variety of air components indispensable

for pneumatic control and actuator drives between filters or regulators and valves.

This series dramatically reduces conventional design and piping labor hours.

# Flexible combination without piping or problems!

A wide variety of function parts enhances versatile unit combinations. Customized specifications are also available.

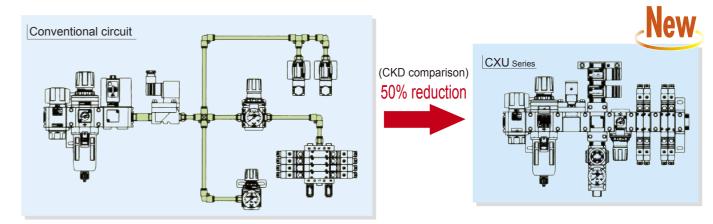

# No more piping or problems

# Piping-versatile, space-saving

Bothersome piping design and work have been eliminated. All work is completed by preparing a single unit. Installation space is also reduced with the elimination of piping and tubes.

This also makes for a neater appearance.

Mounting positions for separate components are eliminated, and errors in mounting dimensions caused when pipes are tightened are solved.

# Improved quality

No threading sections, no external leaks!

This also prevents foreign materials from entering during piping work.

# Flexible combination

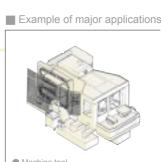

# Vertical or horizontal

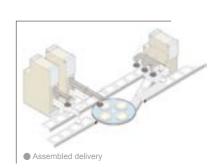

Vertical and horizontal pipes can be arranged versatilely Solenoid valves can also be connected directly.

The simple layout greatly reduces piping design labor hours. (AIR UNIT custom order parts)

Module joining lets air components be changed and expanded freely. Components can be attached and removed from the front face. This also facilitates maintenance.

(Patent pending)

# Safety precautions

Always read this section before starting use.

When designing and manufacturing a device using CKD products, the manufacturer is obligated to check that device safety mechanism, pneumatic control circuit, or water control circuit and the system operated by electrical control that controls the devices is secured.

It is important to select, use, handle, and maintain the product appropriately to ensure that the CKD product is used safely.

Observe warnings and precautions to ensure device safety.

Check that device safety is ensured, and manufacture a safe device.

# WARNING

- This product is designed and manufactured as a general industrial machine part. It must be handled by an operator having sufficient knowledge and experience in handling.
- Use this product in accordance of specifications.

This product must be used within its stated specifications. It must not be modified or machined.

This product is intended for use as a general-purpose industrial device or part. It is not intended for use outdoors or for use under the following conditions or environment.

(Note that this product can be used when CKD is consulted prior to use and the customer consents to CKD product specifications. The customer must provide safety measures to avoid risks in the event of problems.)

- Use for special applications requiring safety including nuclear energy, railroad, aviation, ship, vehicle, medical equipment, equipment or applications coming into contact with beverage or food, amusement equipment, emergency shutoff circuits, press machine, brake circuits, or for safeguard.
- 2 Use for applications where life or assets could be adversely affected, and special safety measures are required.
- Observe corporate standards and regulations, etc., related to the safety of device design and control, etc.

ISO4414, JIS B8370 (pneumatic system rules)

JFPS2008 (principles for pneumatic cylinder selection and use)

Including High Pressure Gas Maintenance Law, Occupational Safety and Sanitation Laws, other safety rules, body standards and regulations, etc.

- Do not handle, pipe, or remove devices before confirming safety.
  - Inspect and service the machine and devices after confirming safety of the entire system related to this product.
  - 2 Note that there may be hot or charged sections even after operation.
  - 3 When inspecting or servicing the device, turn off the energy source (air supply or water supply), and turn off power to the facility. Discharge any compressed air from the system, and pay enough attention to possible water leakage and leakage of electricity.
  - When starting or restarting a machine or device that incorporates pneumatic components, make sure that the system safety, such as pop-out prevention measures, is secured.
- Observe warnings and cautions on the pages below to prevent accidents.
- The precautions are ranked as "DANGER", "WARNING" and "CAUTION" in this section.

A DANGER: When a dangerous situation may occur if handling is mistaken leading to fatal or serious injuries, or when there is a high degree of emergency to a warning.

MARNING: When a dangerous situation may occur if handling is mistaken leading to fatal or serious injuries.

A CAUTION: When a dangerous situation may occur if handling is mistaken leading to minor injuries or physical damage.

Note that some items described as "CAUTION" may lead to serious results depending on the situation. In any case, important information that must be observed is explained.

#### Disclaimer

- 1. CKD cannot be held liable for any business interruption, loss of profit, personal injury, delay cost, or any other ancillary or indirect loss, cost, or damage resulting from the use of or faults in the use of CKD products.
- 2. CKD cannot be held responsible for the following damage.
  - ① Damage resulting from disaster or failure of CKD parts due to fire from reasons not attributable to CKD, or by intentional or negligence of a third party or customer.
  - ② When a CKD product is assembled into customer equipment, damage that could have been avoided if customer equipment were provided with functions and structure, etc., generally accepted in the industry.
  - 3 Damage resulting from use exceeding the scope of specifications provided in CKD catalogs or instruction manuals, etc., or from actions not following precautions for installation, adjustment, or maintenance, etc.
  - Damage resulting from product modifications not approved by CKD, or from faults due to combination with other software or other connected devices.

# Safety precautions

# **Control components: Warning, Caution**

Refer to the "General purpose valve (No. CB-03-1SA)" for precautions for general-purpose control components. Always read this section before starting use.

2 port direct acting solenoid valve CXU10-FAB3/CXU30-FAB4U, 2 port pilot operated solenoid valve CXU30-FAD

# **Design & Selection**

# 1. Safety designing

# **WARNING**

■ This product can not be used as an emergency shut off valve.

Valves in this catalog are not designed to ensure safety such as emergency shutoff. When using in such a system, provide other measures to ensure safety.

■ Take measures to prevent harm to operators or objects if this product fails.

# **A** CAUTION

- Leakage current from other fluid control components
  When using a programmable controller, etc., with CR circuits to
  absorb the surge voltage generated by switching elements, leakage
  current could pass and adversely affect the operation of the solenoid
  valve. Keep leakage current to less than the value given in
  precautions for products in this catalog or values given for products.
- Minimum working pressure differential

The pilot valve must be used at the minimum working pressure difference or higher listed in specifications in this catalog. (CXU30-FAD)  $\,$ 

# 2. Working fluid

# **▲** WARNING

Quality of fluid

Iron rust and dirt, etc., in fluid can cause operation faults or leaks, and lowering product performance. Eliminate such substances.

■ Fluid temperature

Fluid temperature must be kept within the specified fluid temperature range.

# 3. Working environment

# **▲** WARNING

- Only explosion-proof solenoid valves and air-driven valves can be used in an explosion-proof atmosphere. A solenoid valve for explosion proof is not available for an air unit. Select from General purpose valves.
- When using AC voltage, a large noise may be generated, depending on working conditions.

  If this noise is a problem, use DC voltage.
- Do not use this product in an environment in which corrosive gases could impregnate configuration materials.

- Do not use this product near heat-generating elements or where it may be subject to radiated heat.
- Use within the specified ambient temperature range.
- Take appropriate antifreeze measures when in cold climates.

When wrapping insulation around the solenoid valve, etc., do not wrap coils.

- Take appropriate safeguards for protective structures listed in catalog specifications.
- Take appropriate safeguards when using this product in places where oil or spatter from welding, etc., could come in contact.

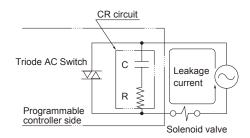

# 4. Securing of space

# **A** CAUTION

■ Securing of maintenance space
Secure sufficient space for maintenance and inspection.

#### 5. Leakage current

■ Leakage current from other fluid control components
When operating the solenoid valve with a programmable
controller etc., confirm that the leak current output from the
programmable controller is within the following specifications.

Voltage Model no.	100 VAC	200 VAC	12 VDC	24 VDC
CXU10-FAB3 CXU30-FAB4U CXU30-FAD	6 mA or less	3 mA or less	1 mA or less	2 mA or less

# **Installation & Adjustment**

## 1. Installation

# **A** CAUTION

- Always thoroughly read the Instruction Manual before installing this product.
- Do not apply external force at the coil section.
- After installing, check for leaks from pipes and for wire connections, and check that the product is correctly installed.

# 2. Piping

# **A** CAUTION

- If the pipe vibrates when the solenoid valve is opened and closed, secure piping.
- The solenoid valve may chatter depending on the circuit. Consult with CKD.
- If the piping cross section on the fluid supply side is restricted, operation may become unstable because of a differential pressure fault when the valve functions. Check that the size of piping on the fluid supply side matches the valve connection port size, and has an inner diameter that does not restrict the piping diameter. (CXU30-FAD)

# 3. Wiring

#### **A** CAUTION

- Use within the allowable voltage range. Use outside of the allowable voltage range may lead to operation faults or coil damage.
- Provide a circuit breaker, such as a fuse, on the control circuit to protect electrical equipment.
- If electrical circuitry is susceptible to solenoid surges, provide measures such as inserting a surge absorber parallel to the solenoid.
- Use a wire more than 0.5 mm² of nominal section area as the reference. Check that no excessive force is applied to leads.
- Use of a switching circuit that does not cause contact chatter will lengthen the life of the solenoid valve and motorized valve.

# **During Use & Maintenance**

# 1. Maintenance and inspection

#### **▲** WARNING

- Do not touch coils or actuators with hands or otherwise while power is on or immediately after turning power on. The solenoid valve's coil and actuator will heat up when electricity is passed through them. Depending on the product, directly touching these sections could cause burns.
- Avoid contact with electrical wiring connection (bare live parts) while power is on. There is a risk of electrical shock.

  Touching electrical wire connections while power is on could lead to electrical shocks.
- Use within the maximum service pressure and maximum working pressure difference range.
- To ensure that the product is used optimally, regularly inspect the product every six months. This frequency varies with the frequency of use.

# **A** CAUTION

- Do not step the valve, nor put the heavy things on it.
- When using the product with continuous energizing and low frequency, consult with CKD.
- If the product has not been used for more than a month, carry out trial operation.
- Read the instruction manual thoroughly before starting maintenance to ensure correct operation.
- Turn power off and release fluids or pressure before starting maintenance.
- Check that the filter is not clogged.

# **During Use & Maintenance**

# 2. Assembling & Disassembling

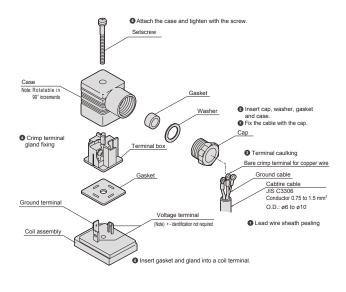

# **A** CAUTION

- When cleaning the product, use a low-polluting cleaning agent such as a neutral detergent. Replace rubber parts, or they could expand.
- Consult with CKD on questions about consumables, etc.
- Tighten coil assembly set screws with the tightening torque below during disassembly and assembly.

Model no.	Coil assembly set screw
CXU10-FAB3	1.1 to 1.8 N • m
CXU30-FAB4U	1.1 to 1.8 N • m
CXU30-FAD	1.1 to 1.8 N • m

# 3. How to wire terminal box

- DIN terminal box with indicator light (Pg11)
  - (1) Use the following cabtire cable.
    - · Cable O.D.: ø6 to ø10
    - · Nominal section area: 0.5 to 1.5 mm<sup>2</sup>
  - (2) Insert the crimp terminal for copper wires into the cabtire cable's lead wire, and crimp the terminal with the designated tool. M3 terminal screws are used with the terminal box.
  - (3) Tighten screws with the following tightening torque.
    - · Setscrew tightening torque: 0.5 N · m
    - · Terminal screw tightening torque: 0.5 N · m

Wire the terminal box following steps 1 to 2

\*The orientation of the cable lead out port can be changed by removing the terminal box from the case, rotating it by 90°, then returning the terminal box to the case.

# 4. Leakage

#### ■ Instantaneous leakage

When using the 2 port pilot operated solenoid valve, pressure suddenly applied when starting the pump with the valve closed could momentarily open the valve and cause fluid to leak. Exercise caution. (CXU30-FAD)

#### Pneumatic components

# Safety precautions

Always read this section before starting use.

Refer to the "Pneumatic Valves (Catalog No. CB-023SA)" for details on precautions for general purpose valves.

5 port pilot operated valve CXU30-4G2 Series

# **Design & Selection**

# 1. Surge suppressor

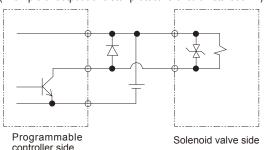

# **A** CAUTION

- The surge suppressor enclosed with the solenoid valve is to protect the output contact for that solenoid valve's drive. There is no significant protection for the other peripheral devices, and devices could be damaged or malfunction by the surge. Surge generated by other devices could be absorbed and cause damage such as burning. Care must be taken for points below.
  - The surge suppressor limits solenoid valve surge voltage, which can reach several hundred volts, to a lower voltage level withstandable by the output contact. Depending on the output circuit used, this may be insufficient and could result in damage or malfunction. Check whether the surge suppressor can be used by the surge voltage limit of the solenoid valve in use, the output device's withstand pressure and circuit structure, and by the degree of return delay time. If necessary, provide other surge measures. The CXU30-4G2 Series solenoid valve with surge suppressor can suppress the reverse voltage surge generated at OFF to the following levels.

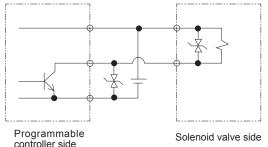

Rated voltage	Reverse voltage value when power turned OFF
24 VDC	47 V

When using the NPN output unit, a surge voltage equivalent to the voltage above plus the power voltage surge could be applied. Provide contact protection circuit.

(Example of output transistor protective circuit installation 1)

(Example of output transistor protective circuit installation 2)

- If another device or solenoid valve is connected in parallel to the solenoid valve, reverse voltage surge generated when the solenoid valve is off is applied to these devices. Even when using the solenoid valve with a 24 VDC surge suppressor, the surge voltage could reach several tens of volts depending on the model. This revere polarity voltage could damage devices connected in parallel or cause them to malfunction. Avoid parallel connection of devices suspected of reversing polarity voltages, e.g., LED indicators. When driving several solenoid valves in parallel, the surge from other solenoid valves could enter the surge suppressor of one solenoid valve with a surge suppressor. Depending on the current value, that surge suppressor could burn. When driving several solenoid valves with surge suppressors in parallel, surge current could concentrate at the surge suppressor with the lowest limit voltage and cause similar burning. Even if the solenoid valve type is the same, the surge suppressor's limit voltage can be inconsistent, and in the worst case, could result in burning. Avoid driving several solenoid valves in parallel.
- The surge suppressor incorporated in the solenoid valve often short-circuits if damaged by overvoltage or overcurrent from a source other than the solenoid valve. If the surge suppressor fails, if a large current flows when output is on, the output circuit or solenoid valve could be damaged or ignite. Do not keep power on in a faulty state. Provide an overcurrent protection circuit on the power or drive circuit or use a power supply with overcurrent protection so that a large current does not flow continuously.

#### 2. 100 VAC specifications

#### **A** CAUTION

■ For 100 VAC, all wave rectified circuit is incorporated. When using an SSR to turn the solenoid valve on and off, a solenoid valve reset fault may occur depending on the SSR.

Take care when selecting the SSR. (Please consult with relay or PLC manufacturer.)

# **Installation & Adjustment**

# 1. Lead wire wiring

# **A** CAUTION

■ Lead standards differ with the type of wire connection. Connect wires appropriately.

Electric connection	Descriptions	Conductor size	Cross-section area	Isolator O. D.
F*	F-connector (with lead wire)	AWG#26	0.13 or equivalent	1.35

When connecting wires, check that leads do not apply tension to the solenoid valve coil.

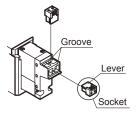

# 2. How to use E-connector

# **A** CAUTION

■ The E-connector is a top/side common connector to which the sockets can be connected to either the top or side directions. The socket assembly is enclosed with the valve. Select the connection direction based on installation.

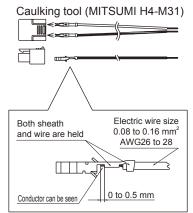

#### ■ How to mount or dismount socket

- When installing the socket, hold the lever and socket with your fingers and insert straight into the square window on the connector. Align the lever with the groove on the connector and lock. When installing from the top, face the socket so that the lever is in front. When installing from the side, face the socket so that the lever is on the top.
- When pulling the socket out, press down on the lever to release jaws from the groove, then pull straight out.

#### ■ How to connect lead wire

- Strip 3 mm of the lead end, arrange the ends of the core wires and insert them into the contact terminal. Crimp with a crimping terminal. Crimp both the sheath and wire, and check that 0 to 0.5 mm of the core wire end is visible.
- After crimping, turn the contact terminal as shown below, and insert into the square window on the socket. The terminal locks when it is inserted into the back. After insertion, tug lightly on the terminal to check that it is locked.

## 3. DIN terminal box

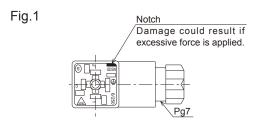

# **▲** WARNING

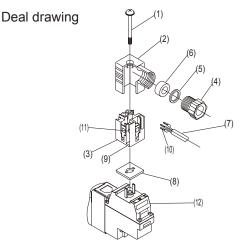

■ Turn power OFF before disassembling or assembling the terminal box. There is a risk of electric shock.

# **A** CAUTION

#### ■ Disassembling

- Loosen the screw (1), and pull the cover (2) in the direction of screw (1). The connector will come off the coil assembly (12).
- Pull the screw (1) out of the cover (2).
- There is a notch (9) (next to GDSN mark) on the bottom of the terminal block (3). Insert a small flat-tip screwdriver between the housing (2) and terminal block (3), and twist it. The terminal block (3) will come off the cover (2). (Refer to Fig. 1.) Remove the terminal box while not applying an excessive force. Failure to observe this the product could be damaged.
- Remove the cable gland (4), and remove the washer (5) and rubber packing (6).

#### ■ Wiring

- Wiring preparation
  - · The cable (7) applicable dimensions are VCTF2 (3) core (ø3.5 to 7) specified in JISC3306.
  - · Strip 10 mm of the cable's lead sheath.
  - · Either twisted wires or single conductors are connected.
  - · When using twisted wires, avoid connecting soldered wires
  - · When using a crimping sleeve (10) on the end of the twisted wire, use the Japan Weidmuller H0.5/6 (0.3 to 0.5 mm²), H0.75/6 (0.75 mm²) or equivalent product. The crimping sleeve must be prepared by the user.
- Wirin
  - · Pass the cable gland (4), washer (5) and rubber packing (6) in order through the cable (7), and insert into cover (2).
  - · Connect to terminal 1 and 2. There is no polarity.
  - · Recommended tightening torque is 0.2 to 0.25 N · m.

# **Installation & Adjustment**

#### ■ Assembly

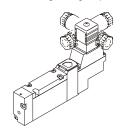

- Set the connected terminal block (3) into the cover (2). (Press in until a click is heard.)
- \* The terminal block can be set in four directions. (Fig. 2)
- Set the rubber packaging (6) and washer (5) in order into the cover (2) cable lead-in port, and then securely tighten the cable gland (4).

Remarks: Reference tightening torque of cable gland is 1.0 to 1.5 N·m.

Check that the cable cannot be pulled out.

Set the gasket (8) between the bottom of the terminal block (3) and the coil assembly (12) plug, and insert the connector. Insert the screw (1) from the top of the cover (2) and tighten. Remarks: Recommended tightening torque of a screw is 0.2 to 0.25 N · m.

Fig.2

# **During Use & Maintenance**

# 1. Common

# **A** CAUTION

- Energizing for a long time could impair solenoid valve performance. Similar caution is required in the following use.
  - During intermittent energizing, energizing takes longer than non-energizing.
  - During intermittent energizing, one energizing session exceeds 30 min. Consider heat dissipation when installing.

Consult with CKD if energizing for a long time.

#### 2. Manual override

#### **▲** WARNING

- CXU30-4G2 Series is an internal pilot operated solenoid valve. If air is not supplied to the P port, the main valve will not change even if the manual override is operated.
- A protective cover of manual override is provided as standard. The manual override protective cover is closed when the valve is shipped to protect manual override, which cannot be seen when delivered. Open the protective cover and operate manual override. Note that the protective cover does not close unless the manual override lock is released.
- Manual override is used for both non-locking and locking. The lock is applied by pressing down and turning manual override. When locking, press down and turn. If manual override is turned without being pressed down, it could be damaged or air could leak.
- Opening and closing the manual protective cover Do not excessively force the manual protective cover when opening and closing it. Excessive force could cause faults. (Less than 5 N)

CXU30-4G2 Series

CXU30-4G2 Series DIN terminal box

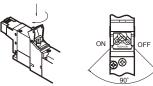

Turn type

- How to operate manual override
  - For non-locking manual override Push in the direction of the arrow until it stops.

Manual override is unlocked when released.

 For locking manual override Push manual override and turn 90° in the direction of the arrow. Manual override is not unlocked even when released.

■ When conducting manual operations, make sure that there are no people near the moving cylinder.

# 3. How to change coils

# **▲** WARNING

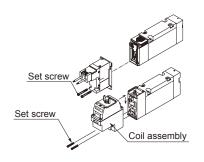

■ E-connector coil assembly

Replace the coil by removing the set screw shown below. Loosening the other screws could cause operation faults. When installing, check that the gasket is installed on the coil side, and note tightening torque. Improper installation could result in air leaks or operation faults.

■ DIN terminal box coil assembly

Replace the coil assembly by removing the set screw shown below. Loosening the other screws could cause operation faults. When installing, check that the gasket is installed on the coil assembly side, and note tightening torque. Improper installation could result in air leaks or operation faults.

The E-connector specification and DIN terminal box specification coil assembly cannot be replaced.

Pneumatic components (F.R.L. unit (modular design))

# Safety precautions

Always read this section before starting use.

Refer to the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for precautions for general purpose pneumatic pressure components.

F.R.L. component (modular design)

# Design & Selection

### 1. Common

# **WARNING**

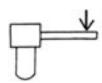

- This product is intended for industrial use, and must not be used in components or circuits used for medical equipment or components that involve human lives.
- Air filter, lubricator plastic bowl, lubricator drip window, and pressure gauge lens

These parts are made of polycarbonate, and cannot be used in environments containing synthetic oil, organic solvents, chemicals, coolant, screw locking adhesive, liquid soap or hot water, etc., or possible exposure to these substances. Refer to Intro 16 for details on bowl chemical resistance.

#### ■ Piping load torque

Make sure that the piping load or torque is not applied on the body or piping.

	_			
Series	1000	2000	3000	4000
Max. torque N • m	10	10	50	50

With the 1000 Series in particular, application of a torque of 20 N · m and over on the piping is "hazardous" as piping could be damaged. Use within the specified torque, even when using the piping adapter.

## **A** CAUTION

■ When drainage levels are high Install the air dryer and drain separator before the air filter.

Use of hot humid air causes excessive drainage from the compressor and may shorten component life or cause corrosion.

- For dry air
  - Rubber parts for the regulator could deteriorate quickly, so use of a fluorine rubber valve assembly is recommended. Consult with CKD when necessary.
- Water lubricated compressor circuit

  Take measures to prevent chlorine-based substances from entering the compressed air.
- Use the automatic drain under the following conditions.

  Failure to observe these conditions could result in malfunction.

  N.O. type automatic drain (exhaust without pressure): for "F"
  - N.O. type automatic drain (exnaust without pressure): for "F" Use the compressor at 0.75 kw (90 ℓ/min. (ANR)) or more.
  - Set the working pressure to 0.1 MPa or more. Purge air with the initially generated drainage until pressure rises to 0.1 MPa.
  - N.C. type automatic drain (no exhaust without pressure): for "F1"
  - The compressor can be used at 0.75 kw or less.
  - Set the working pressure to 0.15 MPa or more.

1000 Series N.C. automatic drain

- The working flow rate must be less than the maximum working flow rate.
- In places with high vibration, such as where the compressor is installed, air could leak from the drain port when the float vibrates. Avoid this use.
- Avoid overflowing the drain because it could cause operation faults.

# 2. Regulator, filter and regulator

# **▲** WARNING

- Install a safety device where an output pressure exceeding the regulator's set pressure value could result in damage or faulty operation of secondary side devices.
- The regulator cannot process residual pressure (remove secondary pressure) when primary pressure is released. Use a regulator with check valve when residual pressure must be processed.
- There are cases when the regulator cannot be used for secondary side sealing circuits or balance circuits

Consult with CKD for these types of applications.

# **A** CAUTION

- Set secondary side pressure of the regulator to 85% or less of the primary side, or else the pressure drop could increase.
- When using regulators in parallel as shown below, do not use the OUT side as a closed circuit. If a closed circuit is required, set a check valve at the regulator's OUT side.

#### 3. Lubricator

#### WARNING

■ Lubricator

Consult with CKD for using lubrication with an air motor or bearings. Also consult with CKD when using this unit at a high frequency such as in a press machine.

## **A** CAUTION

■ If the working air rate is low for the lubricator, oil may not drip.

Check the minimum air rate required for dripping oil.

## 4. Pressure switch

#### **A** CAUTION

■ When using a compact pressure switch PPD, avoid using it as a set with the lubricator. The switch is not a drip-proof structure, so operation could be disabled if the lubricating oil comes in contact with it.

# 5. Shut-off valve

### **A** WARNING

- Precautions for shut-off valve
  - The EXH port is dedicated for installation of the silencer. Tighten with a torque of 3 N · m or less (as far as can be tightened by hand).
    - Avoid piping that applies the piping load or torque, etc., on the EXH port.
  - If the exhaust operation is incomplete because of air quality, manually discharge the air by operating the knob (turn and raise).

# **Installation & Adjustment**

#### 1. Common

# **A** CAUTION

- Avoid installing this product where it is subject to direct sunlight.
- Flush and clean pipes before use.

  Dirt or foreign materials in piping will lower product performance.
- Check that foreign materials do not enter when tightening pipes or joints.

Check that pipe thread swarf or sealing agent does not enter when tightening pipes or joints. Product performance could drop if dirt or foreign materials enter piping.

- Using the F.R.L. correctly
  - Set the regulator pressure setting to increase. After setting pressure, lock the handle. Check primary pressure carefully before setting pressure.
  - 2. Check the arrow indicating the air inlet before connecting. A reverse connection could result in improper operation.
  - Install the air filter and lubricator vertically with the bowl case facing downward. Failure to do so could result in a drainage discharge fault, and prevent dripping from being confirmed.
  - 4. Use of the automatic drain where vibration is present could cause faults and malfunctions.
- Pipe automatic drain piping as follows: Not doing so could cause malfunctions.

Use a drain discharge pipe with ø5.7 or larger size. Keep the pipe length within 5 m, and avoid an upward slope.

Pipe so that no lateral load acts on the bowl.

Fix the cock's hexagonal side when screwing joints, etc., into Rc1/8 female threads.

#### ■ Pipe screw-in torque

Make sure that excessive torque is not applied on the body and piping when piping.

Series	1000	2000	3000	4000
Max. torque N • m	15	30	30	30

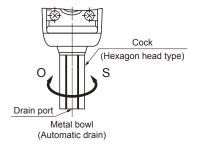

#### ■ Drain piping

- The drain piping for the plastic bowl has a barbed nipple, and can be directly installed. However, confirm that the drain cock is closed before inserting the tube.
- Tightening torque of drain cock
  - The maximum tightening torque of the drain cock is shown below.

· 1000 Series: 0.1 N · m · Other: 0.5 N · m

- Drain piping for metal bowl with automatic drain
  - Fix the cock's hexagonal face before screwing the joint, etc., into the drain port's female threads. When using the metal bowl with automatic drain, if the drain is piped with a tightening joint, manual operation is not possible.

### 2. Regulator, filter with regulator

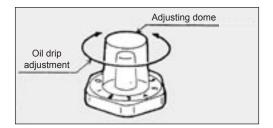

# **A**CAUTION

- Regulator, filter with regulator
  - Lightly tighten (0.6 N·m or less) set screws for the embedded pressure gauge G401-0P, G401 and gauge plug.
  - When installing the pressure gauge with a safety mark on the gauge plug, or when installing a general screw-in pressure gauge, tighten with a torque of 10 to 15 N·m or less.
  - Do not move or swing the product holding the adjustment knob on the regulator.
  - Do not apply pressure exceeding the pressure gauge's full scale, or the pressure gauge could be damaged. (Note when using a full scale 0.2 or 0.4 MPa pressure gauge.)

# 3. Lubricator

# **A** CAUTION

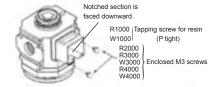

- Adjusting lubricator drip
  - Adjust the oil rate by turning the adjusting dome with bare hands. When closing the dome, tighten with a torque of 0.5 N·m or less. The numbers (scale) on the dial are a guide used after adjustment, and do not indicate the oil drip.

# 4. Pressure switch

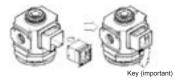

# **A** CAUTION

- Installing the pressure gauge (PPD)
  - Separate the body from the base.
  - Attach an O ring.
    Refer to the outline drawings for the direct installation type (PPD-\*\*\*\*-1F-1) (PPD-\*\*\*\*-1F-2) on the left, and attach the O ring to the O ring groove with a clean finger.
  - Install the base.
    - Install the base with the two enclosed screws (M3).
    - \* Carefully install at the designated position in the designated direction while taking care not to dislocate the O ring.
    - \* Do not tighten one screw completely at once, and instead tighten the two screws so that they are balanced. (Tightening torque  $0.5\pm0.1~N\cdot m$ )

Install and fix the body.

Make sure that there is no dirt or foreign matter at the base, and then insert the body. Make sure that the body does not catch on the base. And, inset the two keys. While pressing the body exterior against the base, face the head of the keys so that they face each other, and then insert them so that they are completely stored in the recesses on the base.

Note) Do install both keys. Make sure that both keys are installed before pressurizing.

Note) When changing the position or orientation of the PPD which has been installed once, install using the new keys, O rings and installing screws enclosed with the option kit.

# 5. Pressure gauge

# **A** CAUTION

# ■ Pressure gauge

Repetitive sudden increase/decreases in pressure and pressure pulses must be avoided, or it could shorten pressure gauge life. Either ease pressure fluctuation in the circuit or consult with CKD so that a pressure gauge with a cushioning screw can be prepared. Applying pressure exceeding the pressure range could damage the pressure gauge.

# **During Use & Maintenance**

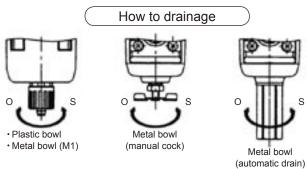

# 1. Common

# **A** WARNING

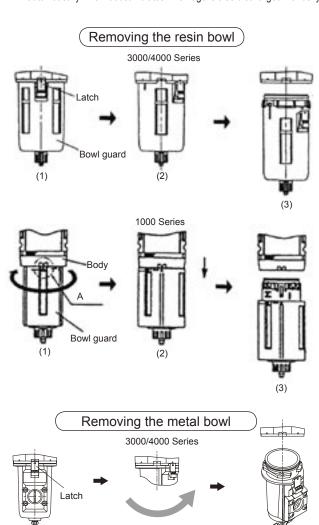

- Regularly, once or more in six months, check the air filter and lubricator's plastic bowl for cracks, damage, and other deterioration.
  - Cracks, damage or other deterioration could result in breakage, so if found, replace with a new bowl or with a metal bowl.
- Check the air filter, lubricator plastic bowl, and lubricator drip window periodically for contamination.
  - If parts are heavily contaminated or if transparency has dropped, replace with a new bowl or drip window.
  - Use a diluted neutral household detergent to wash parts, and then rinse well with clean water. Use of other agents could result in breakage.
- Removing the filter or lubricator bowl Before removing the bowl, stop the compressed air, discharge pressure in the bowl completely, and confirm that no residual pressure remains.

# **A** CAUTION

- Check the oil drip once a day.
  If the oil drip is faulty, problems could occur in the unit being lubricated.
- Do not branch the air into lubricating air and oilless air with a distributor. The lubricator oil could reverse flow
- Performance could drop if the filter element is clogged. Regularly inspect and replace the element.
- Do not disassemble or modify the product.
- Read instructions and precautions enclosed with the product before starting use or maintenance.

- Drainage is started when the cock is turned to the O side, and the discharge is stopped when the cock is turned in the S direction. Manually tighten as far as possible in the direction of S.
- When the automatic drain is provided, drainage is discharged automatically when it accumulates. Drainage is also discharged manually.

(2)

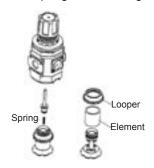

# 2. Filter with regulator

### **A** CAUTION

■ W1000 to W4000 element

The valve assembly can be removed, so also inspect it during maintenance.

Take care not to lose springs, etc., during maintenance.

3. Filter

# **WARNING**

■ Drain so that air filter drainage does not accumulate beyond the maximum.

Components could malfunction if drainage flows into the secondary side.

The resin bowl must not be filled more than the "drain upper limit" or "max. level" stamped on the bowl guard.

# **A**CAUTION

■ Submicron 0.3 µm element
This element cannot be washed and reused. When
the pressure drops to 0.07 MPa, replace the filter
with a new one. (1000 Series is excluded.)

■ Oil mist filter

The life of the mantle (element) is one year (6000 hours) or until pressure drop reaches 0.1 MPa -- excluding the X type. Replace the mantle with a new one when life is reached. (Do not touch the urethane foam layer when replacing the mantle.)

# 4. Regulator, filter with regulator

#### CAUTION

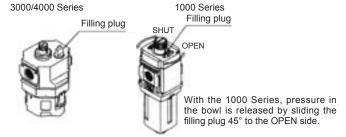

■ Pull the pressure adjustment knob and release the lock before setting the regulator pressure. The regulator could be damaged if the pressure is set without unlock.

# 5. Lubricator

# **A** WARNING

- Use Class 1 turbine oil (non additive) ISO VG32 for the lubricator.
  - Other oils could cause breakage or improper operation.
- Removing the lubricator's filling plug

To prevent the filling plug from popping out, loosen the filling plug by one turn, and then completely depressurize the bowl before removing the filling plug. The dirt around the filling plug could scatter, so completely remove it.

- Close the filling plug after lubricating.
- Never remove the bowl without removing the filling plug (while the bowl is pressurized). (L3000 to L4000)
- With the 1000 Series, never remove the bowl with the filling plug set to the SHUT side (while the bowl is pressurized). (L1000)

# **A** CAUTION

- Periodically replenish oil in the lubricator bowl so that it does not drop below the lower limit.
- When lubricating the L1000, the pressure in the bowl can be released by turning the filling plug. Refer to the above for the operation of the filling plug. (Lubrication can be carried out while the pipes are pressurized.) Check that there is no pressure in the bowl, remove the bowl and bowl guard, and then directly lubricate to the bowl. Refer to the previous page for details on removing the bowl.
- When lubricating the L3000 to L4000, loosen the filling plug slightly to release the pressure in the bowl, and then remove the filling plug. Refer to the above for the operation of the filling plug.

  (By removing the filling plug, lubrication can be

(By removing the filling plug, lubrication can be carried out while the pipes are pressurized.)

Oil can also be supplied from the filling plug hole, and the bowl can be directly lubricated by removing the bowl and bowl guard.

Refer to the previous page for details on removing the bowl.

F.R.L. component

# **Chemical resistance of plastic parts**

# **A** WARNING

- The chemical resistance of plastic parts is shown below.
- Avoid using products in an atmosphere where chemicals are contained in compressed air, the atmosphere, or where they could adhere to parts.
- Use in the above state could lead to bowl damage and accidents.
- Avoid using these types of chemicals or in an atmosphere containing these chemicals.
- A metal bowl is available if these chemicals must be used.

Chemical resistance of plastic bowl and body Use a metal bowl in an atmosphere containing the following chemicals.

Check whether the testing solutions, sealing agents and adhesives contain the following chemicals.

Types of chemicals	Chemical class	Main products containing chemical	General usage examples	Polycarbonate bowl	Nylon bowl	Nylon Body
	Acid Hydrochloride, sulfuric acid, fluorine, phosphoric acid, chromic acid, etc.  Acid washing of metals, acidic degreasing solution, skin treatment solution		Х	Х	Х	
Inorganic chemicals	Alkaline	Alkalies such as caustic soda, caustic potash, calcium hydroxide, ammonium water, or sodium carbonate	Alkaline degreasing of metals Water-based coolant, leakage detection solution	Х	0	0
	Inorganic salts	Sodium sulfate, nitrate of soda, potassium dichromate, sulfate of soda, etc.		Х	0	0
	Aromatic hydrocarbon	Benzene, toluene, xylene, ethyl benzene, styrene, etc.	Contained in paint thinner (benzene, toluene, xylene)	Х	Х	Х
	Chlorinated aliphatic hydrocarbon	Methyl chloride, ethylene chloride, methylene chloride, acetylene chloride, chloroform, trichylene, perchloro ethylene, carbon tetrachloride	Organic solvent-based washing solution for metals (Trichylene, perchloro ethylene, carbon tetrachloride)	x	0	0
	Chlorinated aromatic hydrocarbon	Agricultural chemicals		Х	0	0
	Petroleum components	Solvent naphtha, gasoline, kerosene		X	0	0
	Alcohol	Methanol, ethanol, cyclohexanol, benzyl alcohol	Used as anti-freezing agent Leakage detection agent	Х	Х	Х
	Phenol	Carbolic acid, creosol, naphthol, etc.	Liquid disinfectant	X	Х	Х
	Ether	Methyl ether, methyl ethyl ether, ethyl ether	Brake oil additive	Х	0	0
Organic chemicals	Ketone	Acetone, methyl ethyl ketone, cyclohexanone, acetophenone, etc.		Х	Х	Х
	Carboxylic acid	Formic acid, acetic acid, butyl acid, acrylic acid, oxalic acid, phthalic acid, etc.	Dyes and oxalic acid for aluminum proceeding. Use phthalic acid for paint base. Use as leakage detection agent	x	Х	Х
	Ester	Dimethyl phthalate (DMP), diethyl phthalate (DEP), dibutyl phthalale (DBP), dioctyl phthalate (DOP)	Lubricant, synthetic oil, additive for rust preventing agent Usable as plasticizer for synthetic resin	Х	0	0
	Oxyacid	Glycocholic acid, lactic acid, malic acid, citric acid, tartarate		Х	Х	Х
	Nitro compounds	Nitromethane, nitroethane, nitroethylene, nitrobenzene, etc.		Х	0	0
	Amine	Methylamine, diethylamine, ethylamine, aniline, acetoacetanilide, etc.	Brake oil additive	Х	Х	Х
	Nitrile	Acetonitrile, acrylonitrile, benznitrile, aceloylidyne nitrile, etc.	Raw material for nitryl rubber	Х	0	0

O: Available X: Unavailable (plastic will be damaged.)

Pneumatic components (air unit (CXU Series))

# Safety precautions

Always read this section before starting use.

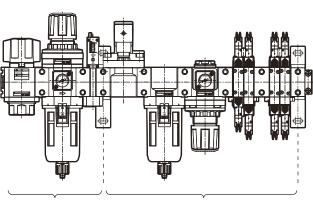

Refer to the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for precautions for general purpose pneumatic pressure components.

Air unit CXU Series

# **Design & Selection**

■ Use T-type brackets at the set spacing.

Single support joiners can be used for three or fewer stations, and double support joiners can be used for five or fewer stations.

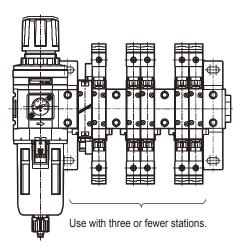

Use single support with three or fewer stations.

Use double support with five or fewer stations.

■ Use 5 port pilot operated valve (CXU30-4G2) with three or fewer stations.

One station consists of two solenoid valves. Up to six solenoid valves can be used.

# **Installation & Adjustment**

- With the 1000 Series unit, the bracket may twist and rise on one side. Tighten and fix the bracket in this case. The bracket can be mounted stably and poses no problem for use.
- Tighten the screw for fixing the 1000 Series joiner at 1 to 1.2 N·m and the screw for fixing the 3000 Series joiner at 3 to 4 N·m.

# Valve air unit Model no. for manifold

#### Overview

The valve air unit is a unit component that lets the solenoid valve be connected to components such as regulators.

This eliminates bothersome piping, and enables immediate use.

#### Features

1 Simple ordering

This unit can be purchased with a single form, making order and delivery control easier.

② Fewer work labor hours

The FR component and solenoid valve

are connected as modules, eliminating work such as piping.

3 Space saving

Appearance is neat with piping and joints eliminated.

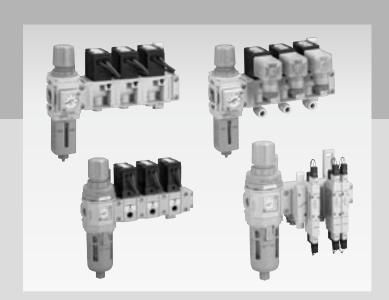

This compact design fits required space.

#### Explanation of icon

Manifold

Complicated options have been left out, making it easy for anyone, including beginners, to select models.

Port size		Rc3/8

Note 3: The set pressure range is limited by CXU30-4G2 working pressure.

### How to order Solenoid valve No.

- regulator. Multiple FR device options cannot be selected.
- Note 5: Model for IN side Left (FR device direction option "No symbol")
- Note 6: Two silencers (SLW-8S) are enclosed with one sub-base.
- Note 7: Refer to dimensions drawings for positions of solenoid valves (1) to (4)
- Note 8: When masking plates are used for all solenoid valves, no symbol is indicated for wire connection and rated voltage options.

● FR component option: Reverse flow CXU30-M4G2-\*\*-\*-R<sub>RT8</sub>X-\*-\*

Note: When reverse flow option X is selected, the IN side and FR device are on the right. The solenoid valve is arranged in order from the left.

The drawing at left is for the regulator.

# Air unit module Discrete model no.

#### Overview

The air unit components make it easy to add to existing units and to purchase parts for maintenance, etc. General purpose components can be purchased together and assembled with air unit components.

#### Features

- Connect solenoid valves as modules
   port valves and 5 port valves can be connected to conventional F.R.L. devices.
- ② Easily connect with joiners Conventional piping materials and tubes are not used, so there is no possibility of foreign materials entry or pressure loss.
- ③ Diverse module components Modules can be split into four directions, twisted 90°, and resized.

#### Explanation of icon

Gasket connection on the IN side
 A gasket is required for connecting module indents.

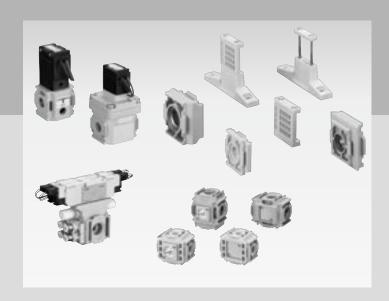

② Use at terminals not possible No connection screw is provided, so a masking adapter or piping adapter is required for use at the terminal.

③ Easily expanded stations IN structures are used on both sides of the module connection section, making it easy to expand stations.

Main inline
The component can be used as
main inline. This structure is the
opposite of the expandable type.

#### Module transform adapter

# CXU13-CA Series

Connect the 1000 Series with the 2000, 3000, and 4000 Series.

#### Specifications

Descriptions	CXU13-CA
Working fluid	Compressed air
Max. working pressure MPa	1.0
Withstanding pressure MPa	1.5
Port size	-
Working temperature °C	5 to 60
Product weight kg	0.04

#### How to use

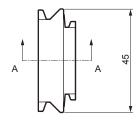

#### How to order

#### CXU13-CA - 00

Note: The CXU13-CA can be connected to the 2000/3000/4000 Series. One C1000-J100 and C4000-J400 joiner set and one gasket are enclosed.

#### Internal structure, parts list and dimensions

# **Custom unit**

# Model no. for custom combination

#### Overview

Complicated pneumatic components can be constructed by purchasing customized units. This eliminates bothersome piping, and enables immediate use.

#### Features

- Versatile combinations
   Versatile layouts reduce the labor hours required for design.
- ② Simple ordering
   This unit can be purchased with a single form,
   making order and delivery control easier.
- ③ Fewer work labor hours The FR component and solenoid valve are connected as modules, eliminating work such as piping.
- 4 Space saving

Appearance is neat with piping and joints eliminated.

This compact design fits required space.

⑤ Front access

Components can be attached and expanded from the front. Even maintenance is easier.

#### Explanation of icon

1 Model dedicated

Models containing -UN are dedicated for customized combinations.

These cannot be ordered as separate parts.

② Face to face dimensions Face to face dimensions are shown in the icon.

③ Use at terminals not possible No connection screw is provided, so a masking adapter or piping adapter is required for use at the terminal.

#### CONTENTS

<F.R.L. component, solenoid valves>

- Filter, regulator

3000 Series base

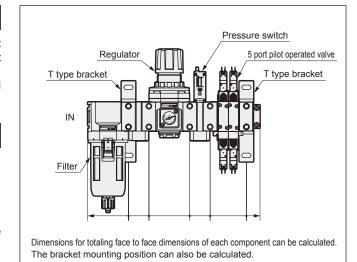

#### Overview

Customized combinations are customer-oriented combinations that meet user needs for diverse combinations. Place orders by filling out the specifications below.

More solenoid valve types, etc., are available than the conventional customized combinations.

#### Preparing customized combination specifications

- 1. Indicate the full model in the model field for the required model.
- Indicate the installation position of the indicated model with a "○".Indicate "UP" or "DOWN" for the orientation.
- 3. Indicate a "O" in the bracket and joiner fields.
- See individual pages for component ordering and details, etc.
- 2000, 3000, and 4000 Series combinations are available. Use 4000 Series base specifications in this case.

direction	X1	Reverse flow (right → left)		

#### A Note on model no. selection

- Note 1: Select options for the drain discharge, bowl material, mantle, and flow direction. When selecting options for several items, list options in order from the top.
- Note 2: The N.O. type automatic drain cannot be selected.
- Note 3: See the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for automatic drain working conditions.
- Note 4: A manual drain cock is provided on all drain discharges.
- Note 5: Combination with option F1 is not available.
- Note 6: Not available for "M" and "X". Replace the element before the differential pressure indicator

The differential pressure indicator functions only when compressed air is flowing. Note that the indicator does not function simply when pressure is applied.

Lubricator Standard white Series

### 3000/L4000-W Series

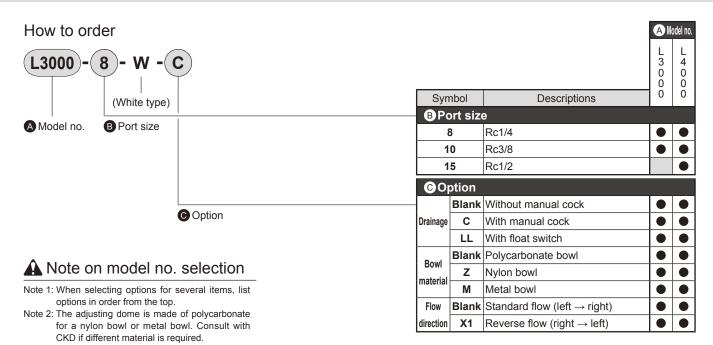

Fine oil mist supply Port size: 1/4 to 1/2

JIS symbol

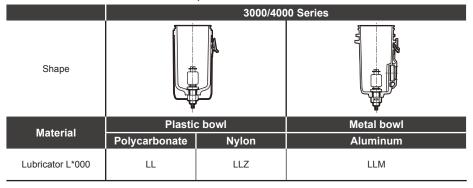

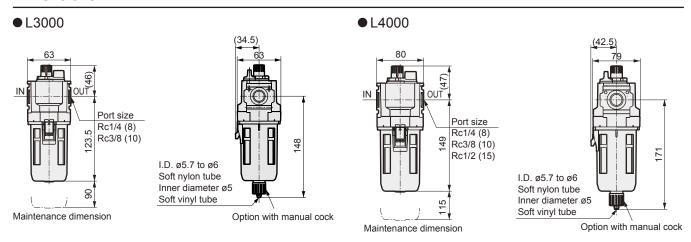

Drain discharge and bowl material combination ("C" in How to order)

#### Option With float switch

#### **Dimensions**

See the F.R.L. Unit in the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for specifications and internal structure.

Mechanical pressure switch Standard white Series

### P4000-W Series

Wide pressure setting range covers 0.1 to 0.8 MPa. Port size: Rc1/4 to Rc1/2

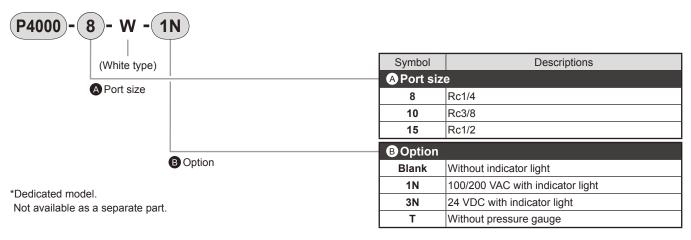

JIS symbol

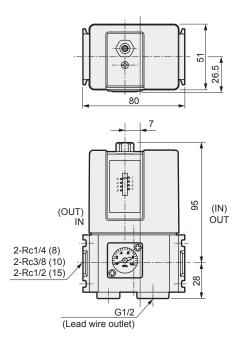

#### How to order

#### **Dimensions**

See the F.R.L. Unit in the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for specifications, internal structure and precautions, etc.

Compact reed switch type Mechanical pressure switch

### P4100-UN-Series

Compatible with module connection to FRL

JIS symbol

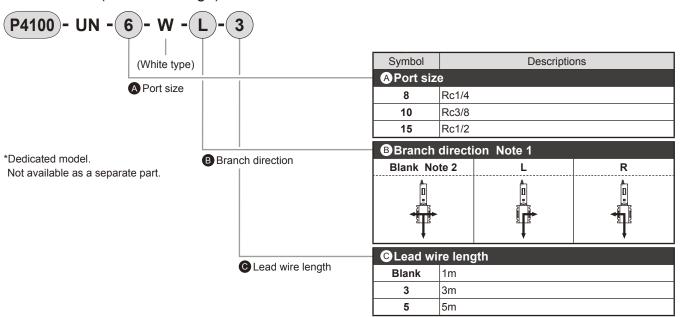

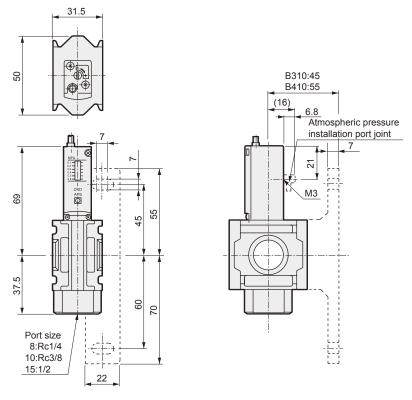

#### How to order (modular design)

#### A Note on model no. selection

Note 1: This is used for intermediate connection of the module series so the module connection section is not threaded.

Note 2: A masking plug matching the port size is enclosed.

Weight 190 g

Shut-off valve Standard white Series

### V3000-W Series

Only 1 action for exhaust operation. Ideal for preventing residual pressure accidents in air pressure lines. Port size: Rc1/4 to Rc1/2

JIS symbol

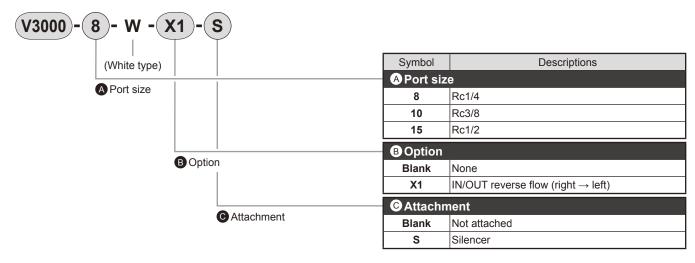

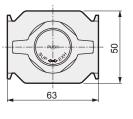

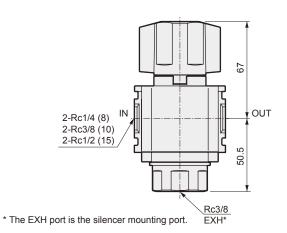

#### How to order

#### **Dimensions**

See the F.R.L. Unit in the "Pneumatic, Vacuum and Auxiliary Components (No. CB-024SA)" for specifications and internal structure.

Lockout valve (OSHA compliant)

### V3010-W Series

Ideal for preventing residual pressure accidents in air pressure lines. Port size: 1/4 to 1/2

JIS symbol

63 mm

OSHA (Occupational Safety and Health Administration)

OSHA established US Safety Standards related to worker safety.

<Regulations for lockout / tagout >

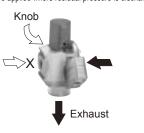

When servicing or maintaining machinery, the air source is closed with a SHUT-OFF VALVE (lockout valve), and residual pressure is discharged. If a third party inadvertently operates the valve during such operation and compressed air is applied, the cylinder, etc., could move suddenly and injure personnel. This standard states that, "All valves used for such purposes shall have a key or a structure which can be locked with a key."

#### How to use

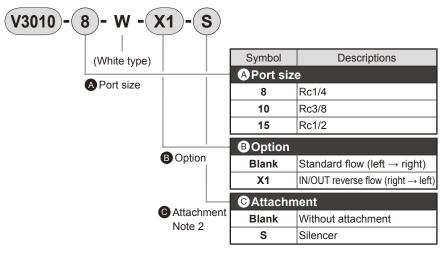

Regular use

Maintenance work
 Locks can be applied where residual pressure is discharged.

#### How to order

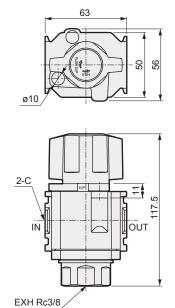

### A Note on model no. selection

Note 1: Consult with CKD for applying the lock at the air supply position.

Note 2: The silencer's element is not flame-retardant resin.

#### **Dimensions**

V3010

#### \* EXH port is the silencer mounting port.

Descriptions	С
V3010-8-W	Rc1/4

V3010-15-W	Rc1/2

2 port direct acting solenoid valve

## CXU30-FAB4U-UN Series

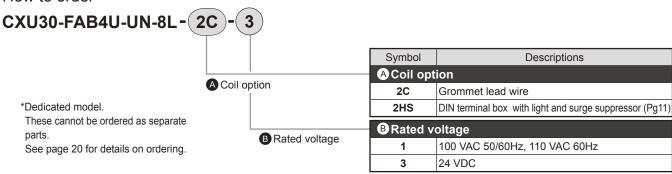

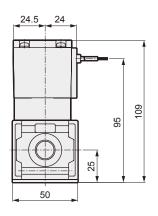

N.C. (normally closed) type Connectable 3000 Series to modules

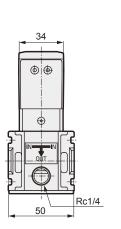

How to order

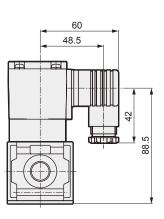

#### **Dimensions**

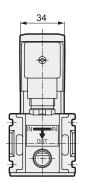

● Grommet lead wire type CXU30-FAB4U-UN-8L-2C-\*

With DIN terminal box (Pg11) CXU30-FAB4U-UN-8L-2HS-\*

2 port pilot operated solenoid valve

### **CXU30-FAD-UN** Series

N.C. (normally closed) type
Diaphragm drive
Connectable 3000 Series to modules
Suitable as modular component master valves

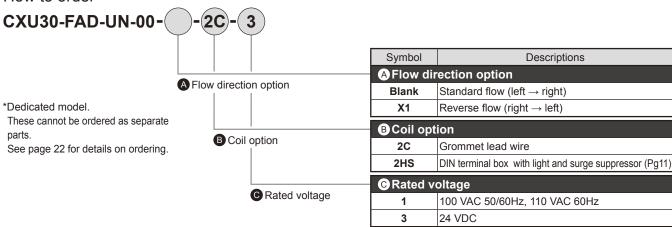

dedicated

How to order

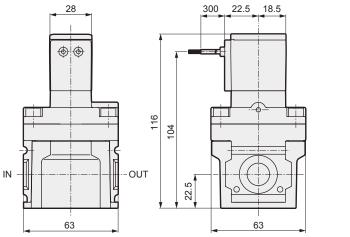

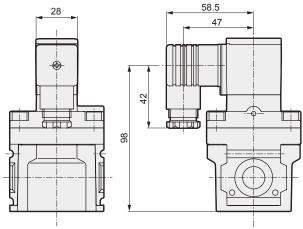

Note 1: Depending on use, such as using with an extremely small flow rate or when the solenoid valve's secondary side is restricted, operation may be unstable at pressure differences less than 0.1 MPa

#### **Dimensions**

Grommet lead wire typeCXU30-FAD-UN-00-2C-\*

● With DIN terminal box (Pg11) CXU30-FAD-UN-00-2HS-\*

Refer to the FAD series in the "General purpose valve (No. CB-03-1SA)" for specifications and internal structure.

5 port pilot operated valve

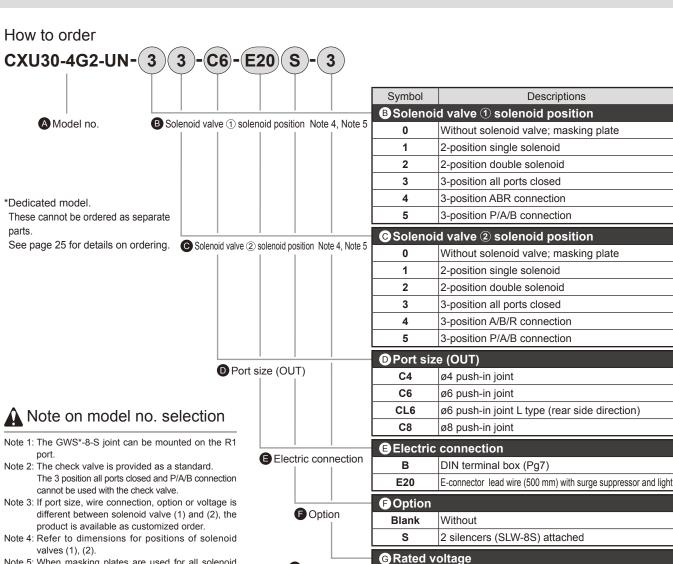

### CXU30-4G2-UN Series

5 port solenoid valve for modular connection with 3000 Series

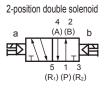

#### Refer to page 29 for solenoid valve model no. list.

100 VAC (rectified bridge integrated)

#### JIS symbol

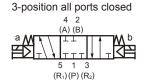

2-position single solenoid (R<sub>1</sub>) (P) (R<sub>2</sub>)

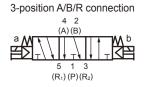

Note 5: When masking plates are used for all solenoid

connection and rated voltage options.

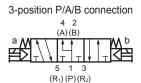

valves, no symbol is indicated for wire

G Rated voltage

24 VDC

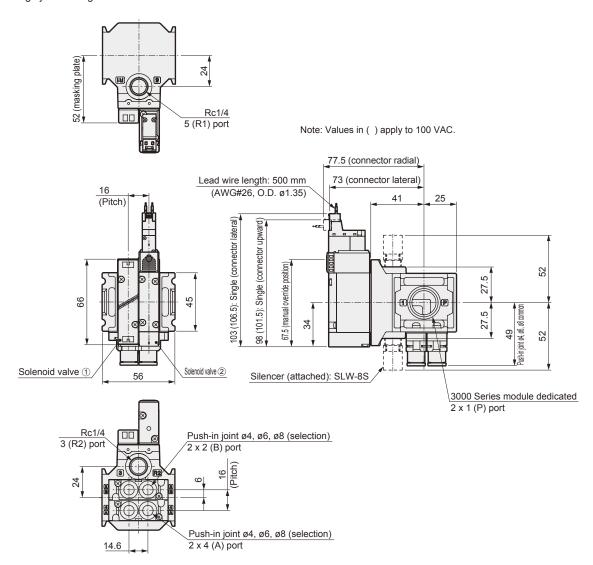

Refer to the 4G Series in the "Pneumatic Valves (Catalog No. CB-023SA)" for specifications and internal structure.

# Air unit custom order parts

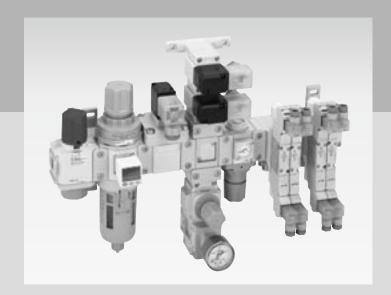

#### Overview

All air unit combinations are available as customized combinations from CKD.

Module connections in the up/down direction, not possible with customized units, are now possible.

#### Features

- ① Vertical or horizontal Vertical and horizontal pipes can be arranged versatility. Solenoid valves can also be connected freely.
- ② Unlimited use Module components not listed in this catalog are also available.
- ③ Fewer work labor hours
  All components are connected as modules, eliminating work such as piping.

#### CONTENTS

 Air unit custom order parts CXUZ Series 71

How to order

CXUZ-FL (

**Dedicated model** 

Each product is assigned a 6-digit number.

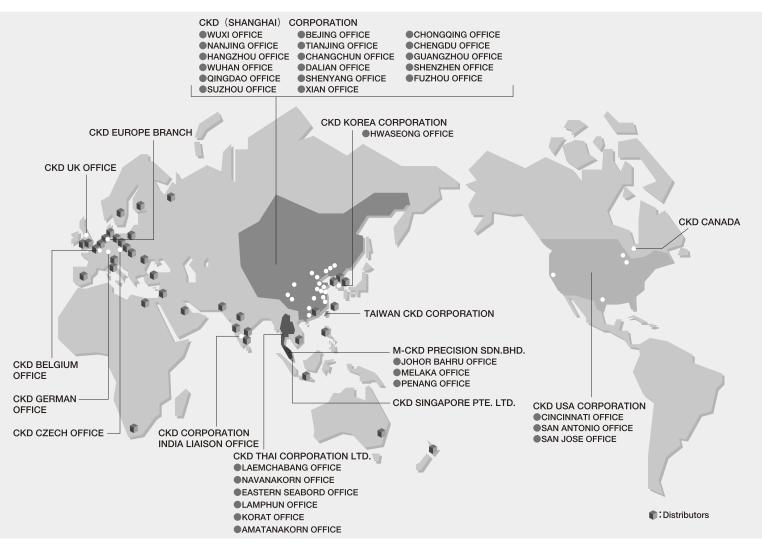

Air unit components can be combined depending on applications and space. Contact your CKD Sales Representative for available combinations.
